

Project Executable Files

Date	02 July 2026
Team ID	SWTID-2026-3278
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submit(Yes/No/NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example similar)	N/A
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	Yes
8	Dockerfile / Containerization config (if applicable)	N/A

9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

[Paste or describe your folder structure here. Example:]

```

/CREDIT CARD PROJECT
  /data
    - creditcard_data.csv (Dataset file)
  /models
    - card_model.joblib (Trained model)
    - feature_names.joblib (Model feature names)
  /static
    - script.js (Frontend script)
    - style.css (Stylesheet)
  /templates
    - index.html (Webpage template)
    - app.py (Main application file)
    - notebook.ipynb (Jupyter notebook)
    - perf_test.py (Performance testing script)
    - requirements.txt (Python dependencies)
    - run_public.py (Public run script)
    - train.py (Training script)
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://credit-card-approval-predictor.onrender.com
Login Credentials (Demo)	N/A
Platform / Hosting Provider	Render
Repository Link	https://github.com/yuvapriya-1/Credit-Card-Approval-Prediction
Demo Video Link	https://drive.google.com/file/d/19yxv5NGtZPEY30sO2nHpCd2sCnglr1bv/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:	
[List required software, versions, and system requirements]	
• Python 3.10 or above • Jupyter Notebook / VS Code • Required Libraries: pandas, numpy, scikit-learn, matplotlib, flask	
Step 1: Download or clone the project files.	
Step 2: Install the required packages:	
<pre>pip install -r requirements.txt</pre>	
Step 3: Open the project in VS Code or Jupyter Notebook.	
Step 4: Run the model:	
<pre>python app.py</pre> (or run the Jupyter Notebook if applicable)	
Step 5: Open the application in your browser:	
<pre>http://127.0.0.1:5000/</pre> (or the URL displayed in the terminal)	
Step 6: Enter the applicant details and click "Predict" to view the credit card approval result.	

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Model accuracy depends on the quality and size of the dataset.	Use a larger and more balanced dataset to improve performance.
2	The model may not perform well on new or unseen applicant data.	Retrain the model regularly with updated data.
3	Prediction is based only on available input features and cannot consider external financial factors.	Add more relevant features and improve feature engineering in future versions.
